

INNORA.AI

Sovereign AI Command Center

Innora.ai is an enterprise AI security and automation platform founded in 2024 in Singapore. As a Sovereign AI Command Center, Innora merges offensive security with autonomous operational workflows, delivering next-generation infrastructure for organizations that demand complete data sovereignty.

Our mission: Hardened Core. Infinite Agents.

SECURITY WING (5 Products):

Nora Veridic - AI Red Team Platform featuring 780+ adversarial security modules across the OWASP ASI Top 10. Automated vulnerability assessment with multi-vector attack simulation capabilities.

Nora Vision - Kernel-Native Intrusion Detection System using eBPF CO-RE kernel telemetry with a Rust stream processing core achieving 250,000+ events per second throughput.

Nora Guard - Binary Vulnerability Research platform integrating 6 unified reverse engineering engines with AI-driven zero-day discovery. Supports ELF, PE, Mach-O, and DEX formats.

Nora Scan - AI-powered Code Security scanner. Chromium CVE-proven vulnerability mining with cross-language support for C/C++, Rust, Go, Python, and JavaScript.

Nora Shrike - Autonomous Penetration Testing achieving 100% on the XBOW benchmark. Fully automated reconnaissance, exploitation, and reporting pipeline.

AUTOMATION WING (4 Products):

Nora Flow - Enterprise Workflow Orchestration with 336 MCP tools and native China ecosystem support including DingTalk, WeCom, Feishu, and Alipay integrations.

Nora Content - AI Publishing Engine supporting automated content creation and distribution across 14 platforms simultaneously.

Nora Mask - Enterprise Stealth Automation with 25+ detection bypass techniques for compliant web automation and data collection.

Nora Core - Central Intelligence Engine built on 11 Rust modules. Provides unified AI routing across 33+ LLM platforms including 15 Chinese providers.

KEY METRICS: 500+ GitHub Stars | 780+ Security Modules | 43 MCP/Agent Security Classes | 336 MCP Tools
